MEMORANDUM

TO: Joint Committee on Wastewater Technology

FROM: Mike Hoover, Chairperson of the Joint Committee

DATE: June 13, 2008

SUBJECT: Proposed revision to NSF/ANSI 40, (40i19r1)

Enclosed is the ballot for Draft 1 of NSF/ANSI 40 issue 19. Please review the proposal and return your ballot by the ballot due date of July 4, 2008.

Purpose

To clarify in 8.5.1.5, which spells out the details for performance testing, that samples are to be taken during the stress recovery period, not the stress loading period.

Background

This issue was brought before the Joint Committee at the 2007 meeting. It was explained that the current language is not clear that samples are not taken during any stress loading period but rather during recovery periods in between stresses. Sampling after the stress period has always been the intended method for stress testing assessment.

Public Health Impact

This is a clarification and there will be no negative public health impact.

If you have any questions about the technical content of the ballot, you may contact me in care of:
