V New Issues / Action Items for multiple standards

A. Extraction Pressure – Pour Through Devices (DWTU-2020-1)

**Motion:** Ballot proposed language under 4.2.3.1 to specify that pour-through products should be tested under atmospheric pressure under NSF/ANSI 42, 53, and 401. T. Palkon motioned; R. Herman seconded.

**Discussion:** T. Palkon noted that extraction test pressure requirements for non-pressurized water treatment devices have been inadvertently omitted under the DWfTU standards. Although it would be assumed that these products would be tested under atmospheric pressure, language should be added to make this clear.

**Vote:** All in favor.

**Motion passed.**
