[RWF-2022-10 Pump performance testing](#)

B. Madison explained that the issue paper was submitted to address language in the standard to help accommodate pumps that are not dedicated purpose pool pumps. The paper also proposed some changes to help clarify and clean up the language.

Motion by R. George:	Reactivate the RWF Task Group on Pumps and send language from RWF-2022-10 to it for language development.
Second:	K. Martin
Discussion:	K. Schaefer suggested the group consider developing a definition for a dedicated purpose pump. K. Gregory noted that the DOE was currently working on replacement motor rules which could impact this language. J. O'Hare suggested the group consider how changes in the language could impact pumps that have already been certified.
Vote:	All in favor.
Motion:	Carries.
